

Freezing-of-gait detection — results summary (pooled LOSO)

Top row: the deployed CNN detector. Bottom row: a simpler 9-feature RandomForest, shown for interpretability.

Detection sensitivity / specificity — CNN: 0.71 / 0.84 vs 9-feature RF: 0.12 / 0.98

(a) CNN — confusion matrix

(b) CNN — operating-point metrics

(c) 9-feature RF — permutation importance

(d) 9-feature RF — SHAP mean impact
